

International Society for Technology in Education ISTE Technology Standards for Teachers (Formerly NETS*T)

Portfolio Information

Congratulations on creating your new ISTE Technology Standards Portfolio! On behalf of the Education Department, we know that this will aid you in keeping track of completing the standards required by the state of Michigan. The purpose of this portfolio is to upload some of your best work to show that you have completed assignments and met the technology standards.

What is an ISTE standard? It is a written description of what you will be expected to demonstrate with technology throughout your education courses. The ISTE Chalk & Wire portfolio is one of the many ways the Education Department assesses whether or not you have met the standards. This portfolio will eventually be viewed by your future employers, so it is indeed an opportunity to show what you are capable of accomplishing through the use of technology which will in turn benefit your future students.

Though completing the standards may seem like small, insignificant assignments, they have the potential to communicate your skills in classroom technology integration through academic excellence and project-based experience. They can be viewed as a way of tracking your progress and professionalism through the Hope College Education Department.

If you have any questions regarding the ISTE Technology Standards Portfolio, Chalk & Wire, or any classroom technology, please email us at edtechteam@hope.edu or fill out the contact form on our website: hopeedtech.weebly.com.

Sincerely,

The Educational Technology Team
